

Pamó product specification

USDC savings pots that earn while they sit.

Version	1.0 · Draft
Date	October 7, 2026
Platforms	Mobile web (390 px first), desktop web
Network and asset	Arc · USDC only

1. Overview

Pamo lets people set aside USDC in named savings pots. Each pot deposits into a USDC lending vault and earns interest while the money sits. The user chooses how each pot earns by picking one of three tiers: Calm, Steady or Bold. The app always shows the live rate, what has been earned and when the money can be taken out.

The name comes from the Yoruba word *pamó*, to keep something safe. The product should feel like a savings account: calm, predictable and written in plain words.

Problem

People who hold USDC usually leave it idle in a wallet. The ways to earn on it assume the user understands vaults, approvals, shares and risk. Rates are shown without context and sometimes framed as promises. There is no simple way to save for a specific goal.

Goals

- A first-time user can create a pot and make a first deposit in under three minutes.
- Every amount, rate, fee and risk is shown before the user signs anything.
- Users can see their total saved and total earned at a glance on every visit.

Non-goals for v1

- Assets other than USDC, and networks other than Arc.
- Fiat on-ramp or off-ramp. Users arrive with USDC in a wallet.
- Shared or group pots, automatic recurring deposits, and a dark mode.

2. Users

User	Need	Typical pot
Goal saver	Saving for rent, school fees or a device by a set date.	Goal pot, Steady, locked
Safety-net saver	Keeping an emergency fund that can be reached at any time.	Anytime pot, Calm
Yield seeker	Earning a higher rate on spare USDC and accepting more risk.	Anytime pot, Bold

3. Core concepts

Pot

A named amount of USDC set aside for one purpose. A user can have many pots. Each pot belongs to exactly one tier.

Goal pot

Has a target amount and an unlock date. Money cannot be withdrawn before the unlock date. Shows progress toward the target.

Anytime pot

No target and no lock. Money can be withdrawn at any time, subject to the vault having cash available.

Tier

The lending vault a pot earns in. Each tier maps to one vault in v1.

Vault shares

What the user receives when depositing. Their value grows as the vault earns. The interface shows USDC values; shares appear only on the review screen.

APY today

The vault's current annual rate. It is variable and always labelled as changing daily.

Tier	Example APY	Description shown to user
Calm	3.12%	The most established vault. Lowest rate, smallest swings.
Steady	4.48%	A balanced vault. A middle rate with moderate risk.
Bold	6.05%	A newer vault. Higher rate, more chance of delays or loss.

Rates are illustrative. The app reads live rates from each vault.

4. Functional requirements

Priority: **P0** is required for launch, **P1** is expected shortly after, **P2** is planned.

ID	Area	Requirement	Pri.
F-01	Wallet	Connect a wallet on Arc. Show the shortened address in the top bar. Prompt to switch network if the wallet is on another chain.	P0
F-02	Dashboard	Show total saved and total earned across all pots, Add money and New pot actions, and the five latest activity items.	P0
F-03	Create pot	Four-step flow: name and type, goal and unlock date (Goal only), pick a tier, review and deposit. Progress shown as “Step n of 4”.	P0
F-04	Deposit	Request USDC approval only when needed, then deposit. Show a review list before every signature.	P0
F-05	Pots list	One card per pot: name, type, value, tier, earned. Goal pots add progress and unlock date.	P0
F-06	Pot detail	Value, goal progress, earnings chart, APY today, pot activity, Add money and Withdraw.	P0
F-07	Withdraw	Bottom sheet with amount, Max, available now, amount received and network fee. Disabled with a reason for locked Goal pots.	P0
F-08	Calculator	Monthly amount, 1–36 months, tier. Shows estimated total and earnings at today’s rate with the label “Not a promise.” Can start a pot with these values.	P0
F-09	Activity	Full history of saves, withdrawals and interest, filterable by pot, each linked to its transaction.	P1
F-10	Edit pot	Rename, change goal amount, move to another tier. A lock date can be extended but never shortened.	P1
F-11	Reminders	Optional reminder to top up a Goal pot, and a notice when a pot unlocks.	P2

5. Key flows

Create a pot and make a first deposit

1. User taps New pot. Enters a name and picks Goal or Anytime.
2. Goal only: enters a target amount in USDC and an unlock date.
3. Picks a tier. Steady is selected by default. Each card shows APY today and the plain-language description.
4. Enters a first deposit amount and sees the review list: you save, into, APY today, vault fees, you receive (vault shares), network fee.
5. If the allowance is too low, the app explains “Allow Pamo to use your USDC” before the wallet asks to approve. Then the deposit is signed.
6. Success: “Saved. 500.00 USDC is in Rent.” The user lands on the new pot.

Withdraw

1. From pot detail, user taps Withdraw. A bottom sheet shows the amount available now.
2. User enters an amount or taps Max, then sees what they receive and the network fee.
3. User signs. Success shows the new pot value and the USDC returned to the wallet.

6. States and edge cases

Situation	Behaviour and message
No wallet connected	Calculator and tier information are viewable. Any action asks to connect a wallet first.
No pots yet	Empty state: “Nothing saved yet. Start with any amount.” with one green button.
Not enough USDC	Inline error under the amount with the wallet balance. Continue stays disabled.
User rejects in wallet	“Cancelled. Nothing was moved.” The user returns to the review step.
Transaction fails	Error banner with the reason in plain words and a Try again button. Nothing is shown as saved until confirmed.
Goal pot still locked	Withdraw disabled with “Locked until Mar 1, 2027.”
Vault low on cash	Caution banner: “This vault is low on available cash.” Max is capped at the amount available now.
Wrong network	Banner with a Switch to Arc button. All actions disabled until switched.
Rate falls	No alarm. The new APY shows with “changes daily”. Calculator estimates update.

7. Content rules

- Every amount shows its unit and two decimals: 120.50 USDC, never \$120.5.
- Rates are always “APY today” and say they change. Never “guaranteed”, “fixed” or “up to”.
- Estimates are labelled “Estimate at today’s rate. Not a promise.”
- Use “save” and “pot”, not “invest” or “fund”. Explain approvals as “Allow Pamo to use your USDC”.
- Errors say what happened and what was not affected.

8. Design requirements

All screens follow the Pamo design system and brand kit.

- **Colour:** white backgrounds (60–70%), black text (20–30%), Pamo green #0B7A4B for actions and gains (about 10%). Bright green #3DDC84 only on black.
- **Type:** Be Vietnam Pro. Tabular figures for all amounts. Balance 48/56 bold; body 16/24.

- **Actions:** one green primary button per screen. Secondary actions are black outline.
- **Tiers:** always the name plus a three-bar level mark. Never colour alone.
- **Accessibility:** text contrast at least 4.5:1, tap targets at least 44 px, every state carries a word or icon.

9. Technical notes

- Each tier maps to one USDC lending vault on Arc using a standard vault interface (deposit, withdraw, shares, total assets).
- Pots are recorded per wallet so a single vault position can be split across several pots. Goal locks are enforced on-chain, not only in the interface.
- APY is read from each vault and refreshed at least every 15 minutes. Earnings are current value minus net deposits.
- No custody: funds move only from the user's wallet to the vault and back, always with the user's signature.

10. Success metrics

Metric	Target at 90 days
Connected wallets that complete a first deposit	40%
Median time from New pot to confirmed deposit	Under 3 minutes
Depositors who add money again within 30 days	35%
Failed or abandoned signatures after the review step	Under 10%

Targets are starting assumptions to be reviewed after launch.

11. Risks and open questions

- **Vault risk:** a vault could pause withdrawals or lose funds. Which vaults back each tier, and who reviews them?
- **Early unlock:** should a Goal pot allow an emergency withdrawal before its date, and with what friction?
- **Fees:** will Pamo charge a fee in v1? If so, it must appear in the review list.
- **Regulation:** what disclosures are required in each launch market for a savings product built on stablecoins?
- **Gas:** can network fees be sponsored for first deposits to reduce drop-off?
